Agenda

- ✓ EnergyCAP savings maturity model
- ✓ Outline key benefits and ROI
- ✓ Craft a persuasive proposal
- ✓ How CSU Fullerton did this last year!
- ✓ Q&A

EnergyCAP Solutions

EnergyCAP Savings Maturity Model

Maturity Stage	Product/Service	Estimated Additional Savings	Cumulative savings/ cost avoidance	Key Value Drivers
1. Utility foundation	Utility Bill Management (UBM)	1-3%	1-3%	<ul style="list-style-type: none"> - Data consolidation - Time savings - Low-hanging fruit from bill auditing & benchmarking
2. Automate data	Bill CAPture + Managed Services	+2-5%	3-8%	<ul style="list-style-type: none"> - Automation of bill entry - Reduced manual effort - Additional billing errors identified
3. Streamline payment	Bill Payment	+3-4%	6-10%	<ul style="list-style-type: none"> - Eliminate late fees - Streamlined processing - Time savings in AP workflows
4. Monitor usage	Smart Analytics	+5-10%	11-20%	<ul style="list-style-type: none"> - Energy usage monitoring - Efficiency upgrades (CAPex) - Operational savings (schedules, set points, proactive management)
5. Comply & report	CarbonHub	+1-3%	12-25+%	<ul style="list-style-type: none"> - Simplified ESG & GHG reporting - Time savings - Improved compliance readiness

* Savings dependent on internal teams or consultants acting on data provided by EnergyCAP software

Justification & overcoming objections

Common concerns

"It's too expensive"

"We're fine with spreadsheets"

"We don't have the resources"

Counter strategies

- Demonstrate fast ROI and long-term savings
- Outline the opportunity cost of "not acting"
- Highlight time and cost savings with measurable metrics
- Present real-world success stories

Consensus building tips

- Build a coalition of champions across facilities, finance, IT, and sustainability team
- Present a clear, unified vision for operational excellence

Craft a winning proposal

template**

Executive summary

Define objectives and key benefits

Current challenges

Detail manual inefficiencies and data fragmentation

Proposed solution

Introduce energy management software (EnergyCAP) and its features

Cost benefit analysis

Outline savings, ROI, and payback period

Implementation plan

Phases, training, and support

Stakeholder impact

Benefits for facilities, sustainability, finance, and IT

Risks and mitigation

Address potential concerns and strategies

Tools and templates

Use EnergyCAP's proposal templates for a structured, persuasive pitch

Executive summary: What do you want?

Energy & Financial Management Enhancements

Software Solutions Proposal

In today's rapidly evolving energy landscape, effective utility management and financial oversight are paramount.

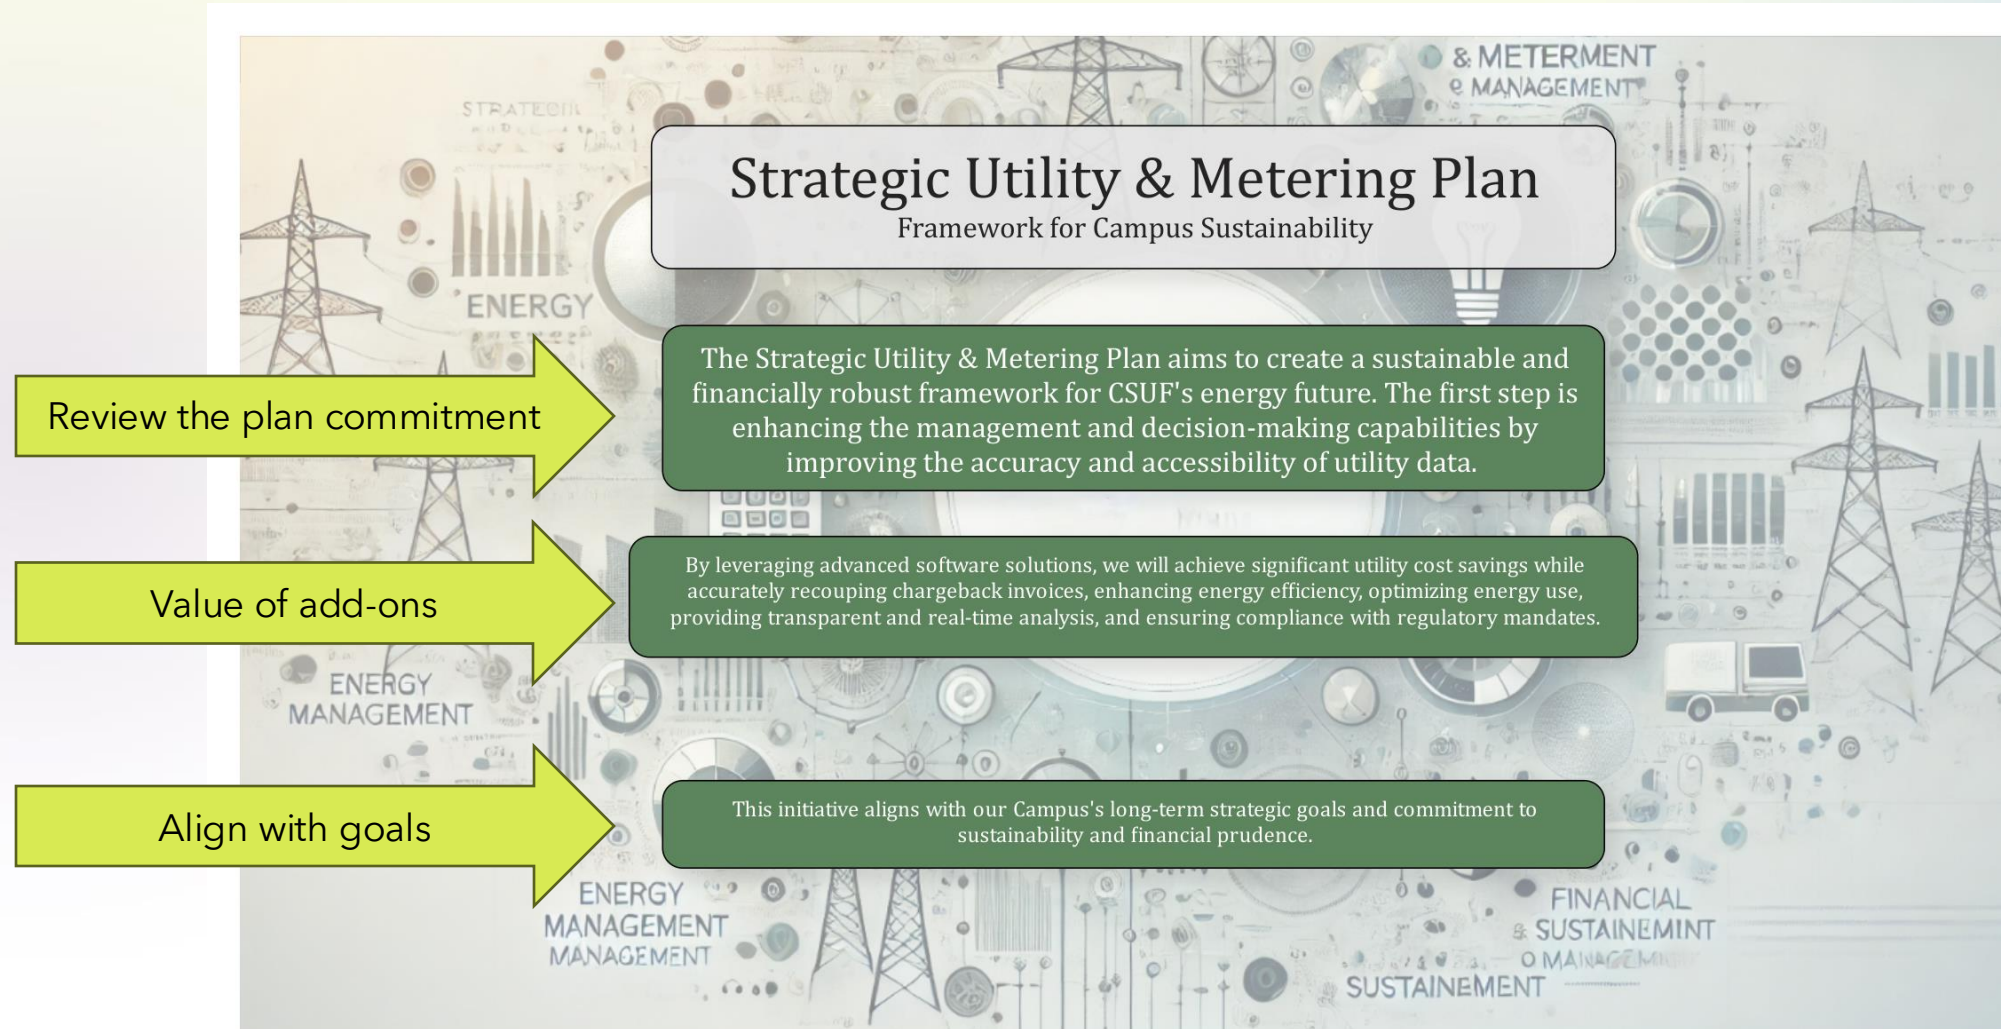

To position our campus as a leader in energy efficiency and sustainability, we propose the acquisition of EnergyCAP software add-ons – **CarbonHub, Smart Analytics, RDBI, and Budgets & Accruals** – alongside our existing EnergyCAP software library: Utility Management, BillCapture, Chargebacks & AP Integration.

These tools will enhance our existing utility management capabilities, support the Strategic Utility & Metering Plan, and provide significant cost savings and operational efficiencies.

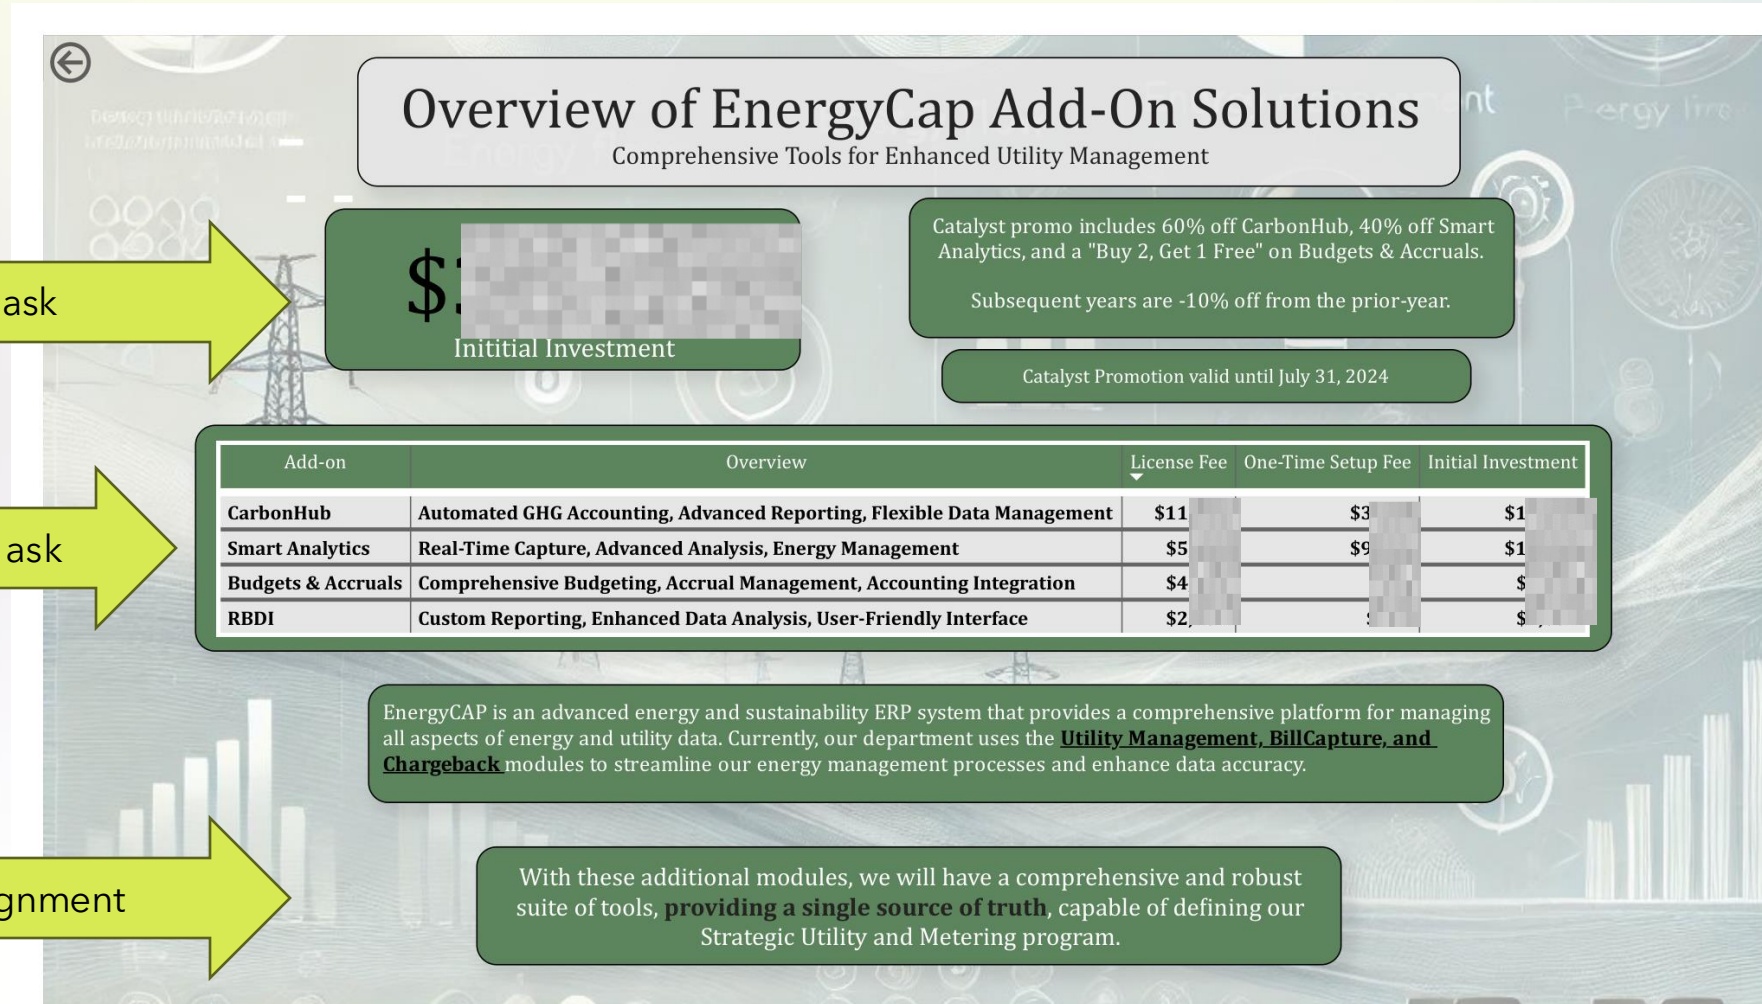

List the add ons

Why? Cost savings, efficiency, hit plan

How the ask aligns to strategic goals

Financial overview of the ask...

CarbonHub add on overview & cost

Valid till July 31, 2024

CarbonHub

Platform to Net-Zero

CarbonHub is an advanced software platform designed to automate and streamline greenhouse gas (GHG) accounting. It enables precise and granular tracking of emissions across all scopes (1, 2 & 3), ensuring compliance with regulatory standards and supporting our sustainability initiatives.

\$
\$3,

Up to 450 emission points tracked for Scope 1, 2 & 3

60% Off First-Year License Fee

Relevance to the Utility & Energy Department	Key Benefits
Supporting Energy Audits & Reporting	Automated GHG accounting improves the accuracy and efficiency of energy audits and regulatory compliance.
Advanced Reporting Tools	Facilitates the creation of detailed and comprehensive energy usage and emission reports for presentations and audits.
Enhanced Data Management	Flexible data management supports the integration of various energy-efficiency building system technologies
Detailed Emission Tracking	Provides granular and precise tracking of Scope 1, Scope 2, and Scope 3 emissions
Integration with Strategic Energy Plan	Supports the integration of all functions with the campus Strategic Energy Plan and helps achieve GHG reduction targets set by CUSE, the state of California, and the Chancellor's Office

Details for carbon goals

Precision & Granularity with CarbonHub

Enhanced GHG Accounting & Reporting

To position CSUF as a leader in achieving carbon neutrality within the CSU system and the state, we must meticulously track our emissions—past, present, and future

Currently, our GHG tracking is broad and updated annually, while only tracking Scope 1 & 2. CarbonHub will allow us to be more precise, granular, and frequent in our tracking, allowing CSUF to make fine adjustments reactively.

STARS v3.0, Transportation Demand Management Plan, Campus Sustainability Master Plan

Net-Zero 2045

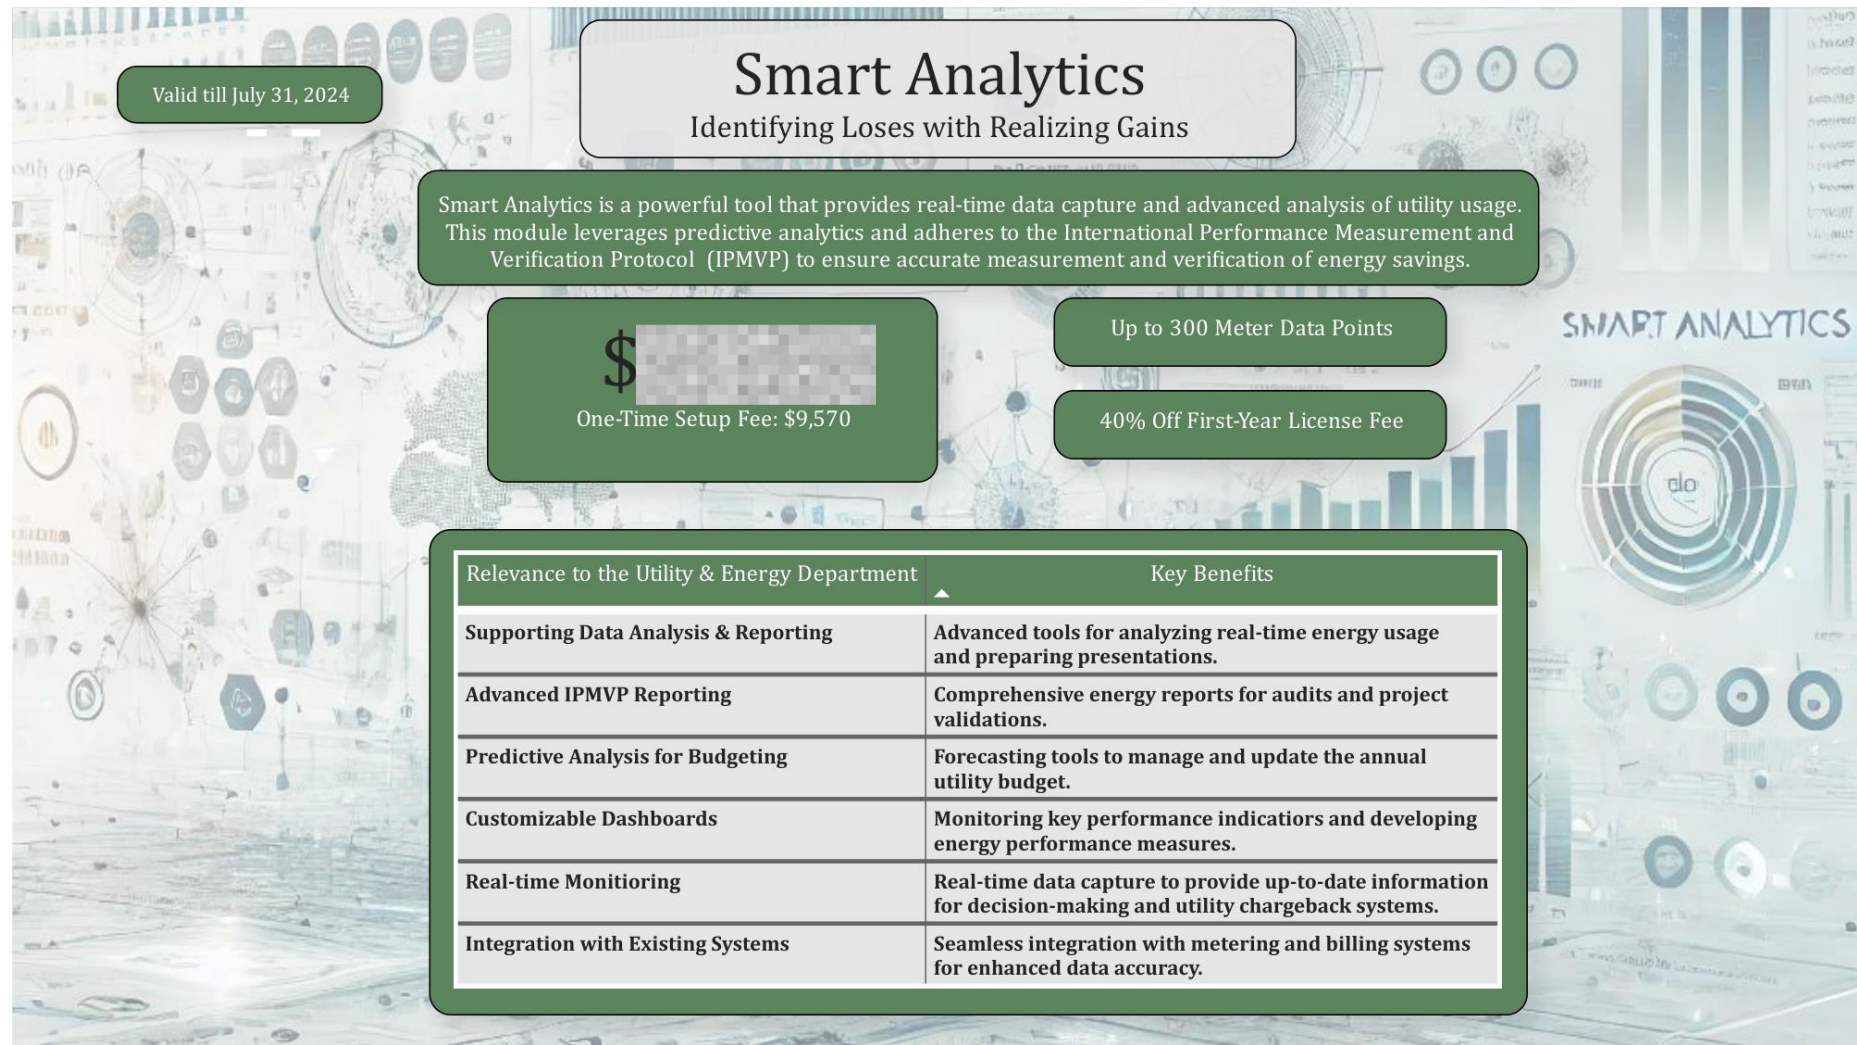

CSU 2040

80% of 1990 GHG levels

To realistically achieve the CA Net-Zero 2045 or CSU Sustainability Policy, CSUF needs to start accurately tracking GHG emissions today, and formulaically determine a baseline to compare our levels.

Capturing Emissions that we were once unaware of.

ESA Add on overview

Smart Analytics
Identifying Losses with Realizing Gains

Valid till July 31, 2024

Smart Analytics is a powerful tool that provides real-time data capture and advanced analysis of utility usage. This module leverages predictive analytics and adheres to the International Performance Measurement and Verification Protocol (IPMVP) to ensure accurate measurement and verification of energy savings.

\$ [Redacted]
One-Time Setup Fee: \$9,570

Up to 300 Meter Data Points

40% Off First-Year License Fee

Relevance to the Utility & Energy Department	Key Benefits
Supporting Data Analysis & Reporting	Advanced tools for analyzing real-time energy usage and preparing presentations.
Advanced IPMVP Reporting	Comprehensive energy reports for audits and project validations.
Predictive Analysis for Budgeting	Forecasting tools to manage and update the annual utility budget.
Customizable Dashboards	Monitoring key performance indicators and developing energy performance measures.
Real-time Monitoring	Real-time data capture to provide up-to-date information for decision-making and utility chargeback systems.
Integration with Existing Systems	Seamless integration with metering and billing systems for enhanced data accuracy.

ESA value and expected outputs

Enhancing Decision Making with Smart Analytics

Supporting the Role of the Utility & Energy Analyst

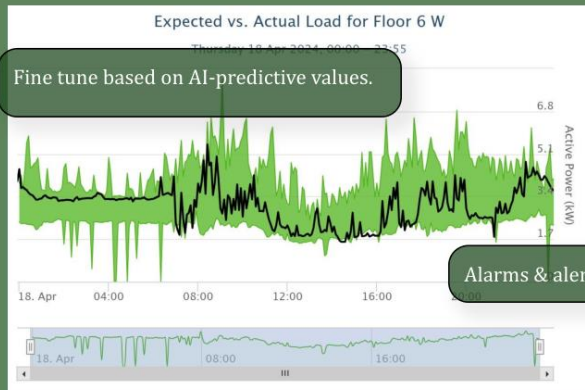

Consolidate all metered utility databases into a single database, replacing multiple systems (PME, WaterScope, EcoStructure, SCE, SCG, DGS) to enable timely and reactive management.

Smart Analytics offers robust IPMVP capabilities, enabling precise M&V of energy savings. This ensures:

- Accurate Savings Measurement:
- Performance Validation:
- Enhanced Credibility:
- Optimized Investments:

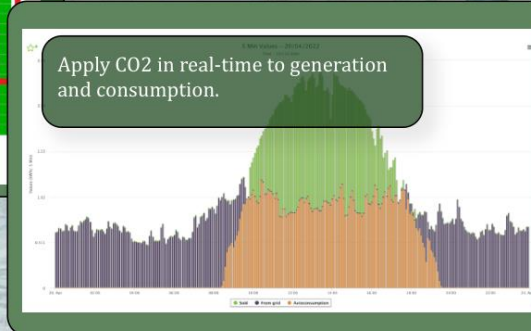

Identify intensive periods and how they impact utility bills based on TOU rates.

Fine tune based on AI-predictive values.

Alarms & alerts provide informative & actionable insights.

Apply CO2 in real-time to generation and consumption.

RDBI overview

Valid till July 31, 2024

RDBI

Report Designer with Business Intelligence

The RDBI module provides data integration capabilities with business intelligence software with advanced reporting, allowing for the creation of custom reports and detailed analysis of utility and financial data.

\$

\$7

It simplifies the process of data integration and report generation, making it accessible to various stakeholders. This allows the facilitation of public-facing and inter-departmental dashboards, increasing consistency and transparency and allowing data to be downloaded as needed.

Relevance to the Utility & Energy Department	Key Benefits
Custom Reporting Capabilities	Allows for the creation of tailored reports to meet specific needs and requirements, enhancing decision-making for stakeholders.
Enhanced Data Analysis	Provides tools for in-depth analysis of energy usage data, supporting the development of energy policies and procedures.
Integration with Existing Systems	Ensures seamless data flow and integration with current energy management and billing systems.
Support for Complex Projects	Facilitates the management and reporting of complex energy efficiency projects and financial tracking.
User-Friendly Interface	Simplifies the process of report creation and data analysis, making it accessible for various stakeholders.

RDBI value and expected outputs

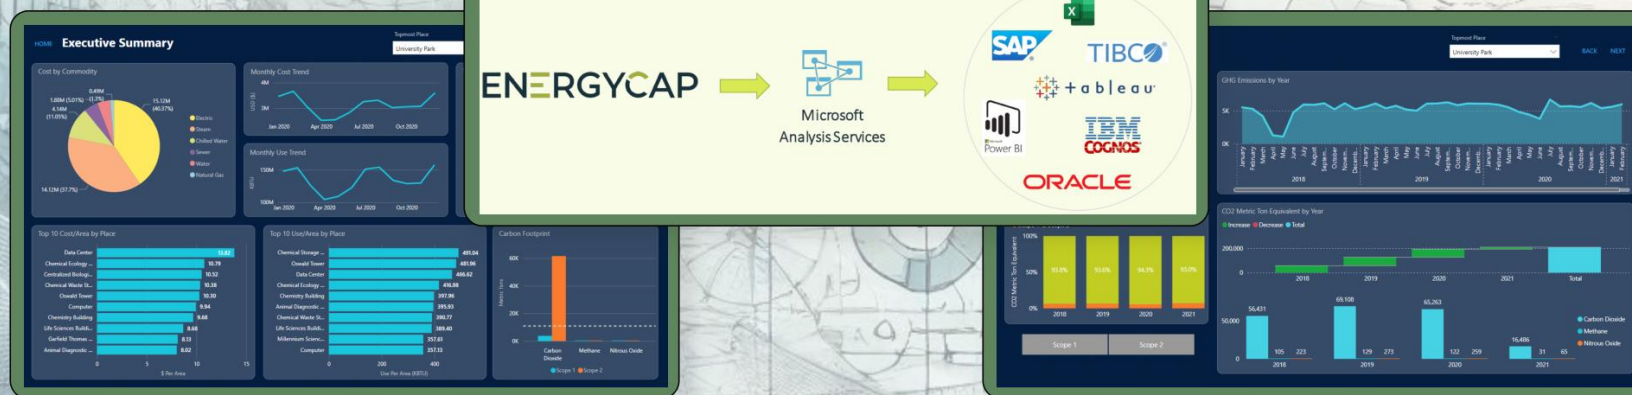

Streamlined Reporting with RBDI

Custom Reporting & Data Integration

Current report dashboards are built monthly using data from the previous month. This involves a time-consuming process of downloading, formatting, calculating, uploading, reformatting, and verifying data, which is prone to errors.

Provides transparency, redundancy, and dependability with data reports. Reports are trustworthy, final and delivered immediately

Updated daily and automatically; dashboards and reports provide public-facing and internal departments with the most recent available and downloadable data

Budgets & Accruals overview

Valid till July 31, 2024

Budgets & Accruals

Strategic Financial Planning

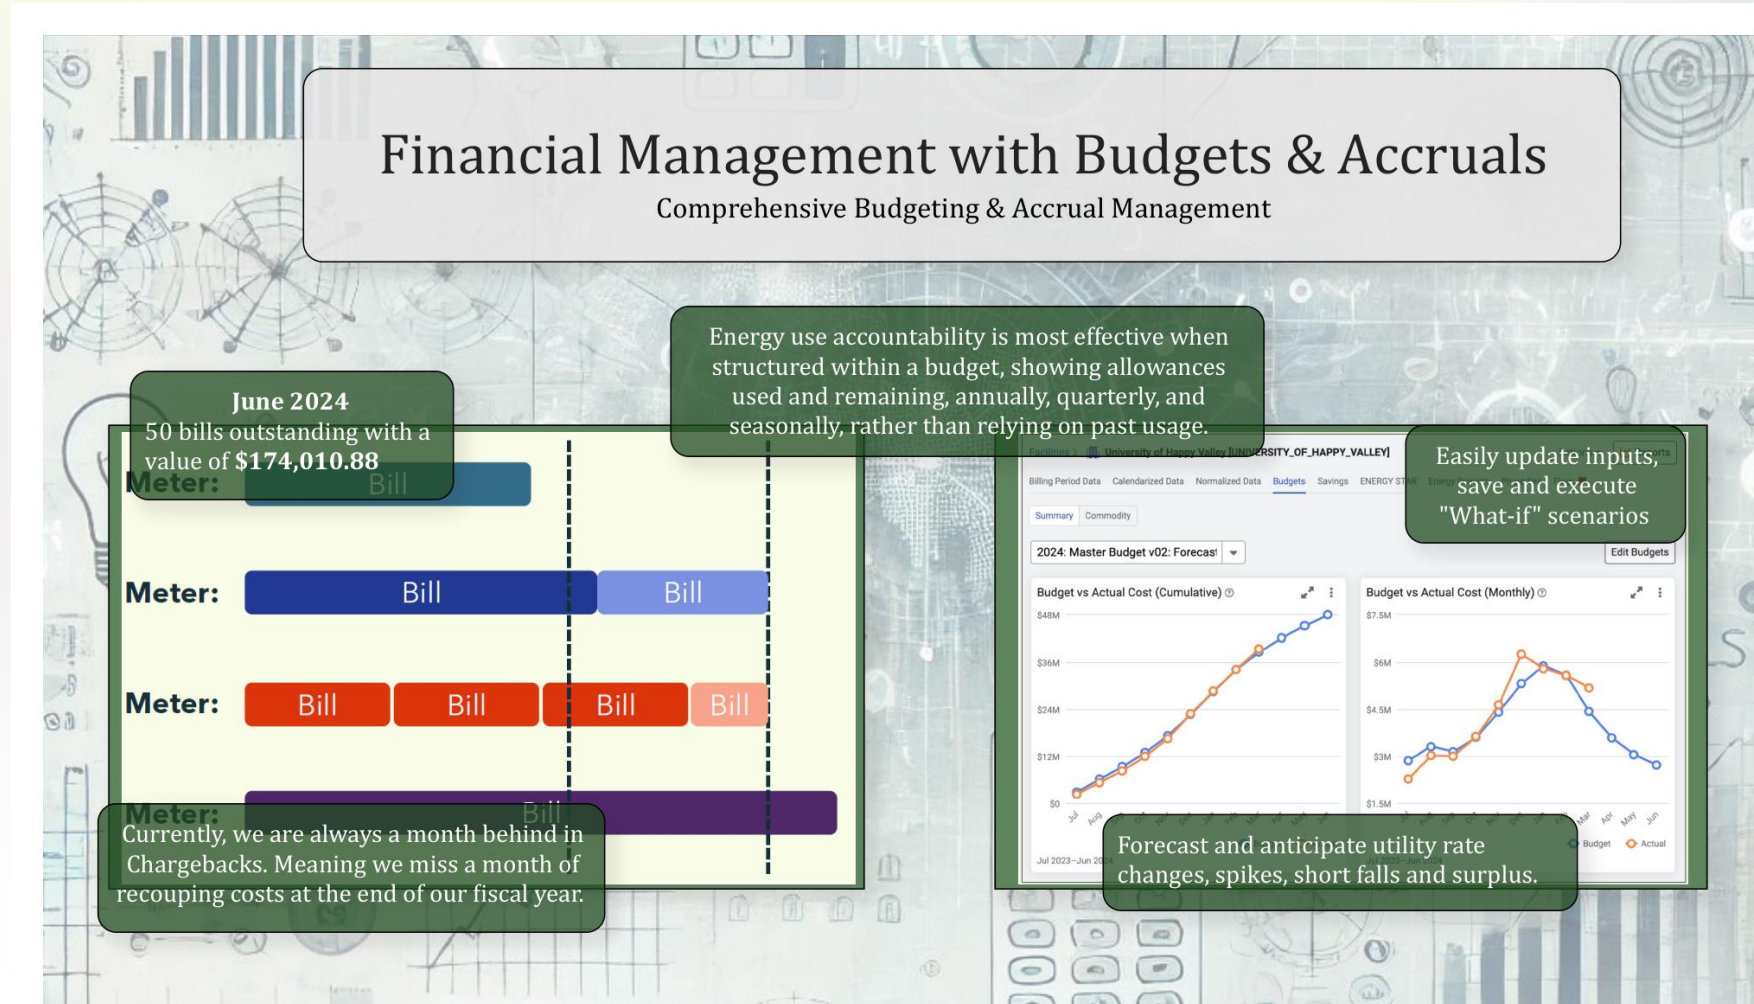

Budgets & Accruals is a comprehensive financial management tool that provides detailed budgeting and accrual management capabilities. This module integrates seamlessly with existing EnergyCap accounting systems, ensuring accurate financial tracking and reporting.

\$

"Buy 3, Get 1 Free" between Budgets, Accruals & AP Integration

Relevance to the Utility & Energy Department	Key Benefits
Accounting Integration	Integrates with existing accounting systems for seamless financial operations and reporting
Accrual Management	Facilitates accurate financial tracking and management of utility expenses and revenues.
Comprehensive Budgeting Tools	Supports the development and tracking of the annual campus budget, ensuring financial targets are met.
Detailed Financial Reporting	Provides comprehensive financial reports, aiding in the analysis and presentation of budget and accrual data.
Support for Campus Master Plan	Ensures that financial planning aligns with the long-term Campus Master Plan and state mandates

Budgets & Accruals value & expected outputs

Again, address the “why?” “why now?”

Alignment with Regulation & Mandates

Reminder of the plan

In the context of our Strategic Utility & Metering Plan, it is crucial to recognize the importance of aligning our initiatives with relevant regulations, policies, and mandates.

These guidelines not only provide a framework for compliance but also set ambitious targets that drive innovation and efficiency in utility management. By adhering to these standards, we ensure that our campus is not only meeting legal requirements but also contributing to broader environmental and sustainability goals. The proposed EnergyCAP software add-ons—CarbonHub, Smart Analytics, RDBI, and Budgets & Accruals—will play a pivotal role in helping us achieve these objectives.

Reminder of the regulations

2040 Sustainability Policy

Reducing GHG Emissions, Increasing Renewable Energy Use, Improving Energy Efficiency

- CarbonHub: Tracks GHG Emissions
- Smart Analytics: Optimizes Energy Use
- RDBI: Detailed Reporting
- Budgets & Accruals: Financial Planning

CA Net-Zero 2045

Achieve Carbon Neutrality by 2045

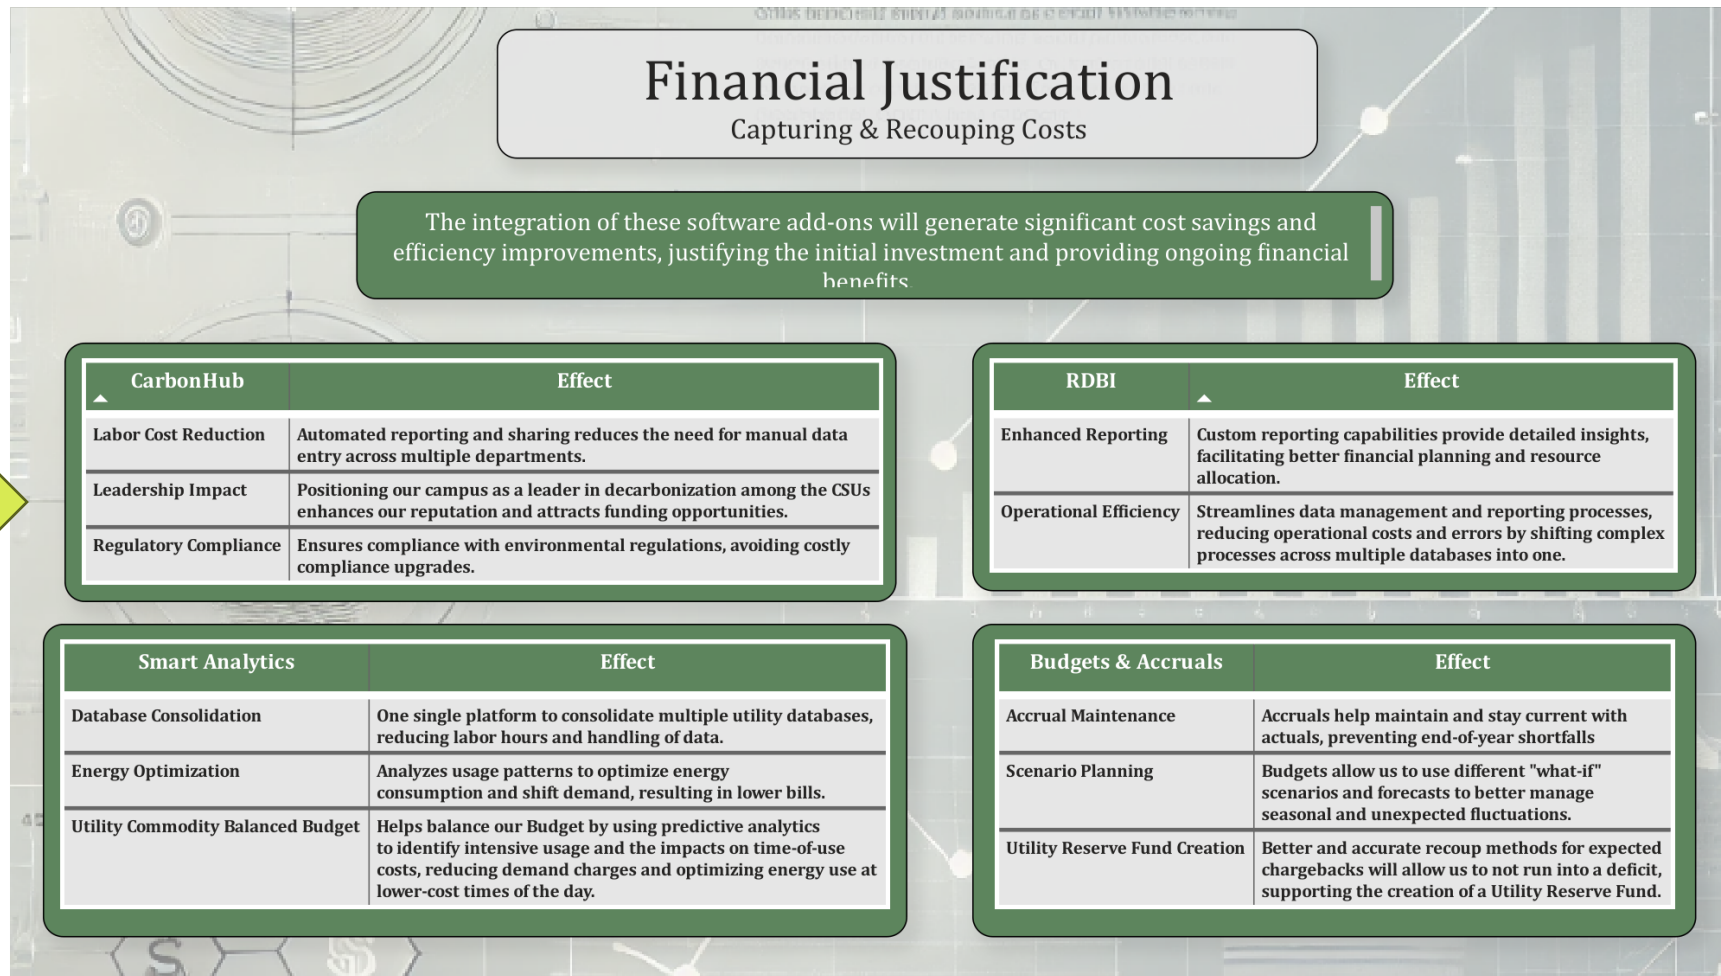

- CarbonHub: Tracks Progress
- Smart Analytics: Data Analysis
- RDBI: Comprehensive Tracking

Relevant Policies & Mandates

- Title 24 Building Energy Efficiency Standards
- CA Executive Order B-18-12
- CA Renewable Portfolio Standard
- AB 32: CA Global Warming Solutions Act
- SB 350: Clean Energy & Pollution Reduction Act

Conclusion

Conclusion

Next Steps

The proposed acquisition of EnergyCAP software add-ons—CarbonHub, Smart Analytics, RDBI, and Budgets & Accruals—represents a strategic investment in our campus's future. By integrating these advanced tools into our existing utility management framework, we will achieve several critical objectives:

Enhanced Utility Management

CarbonHub will automate GHG accounting, ensuring precise tracking of emissions and compliance with regulatory requirements.

Smart Analytics will provide real-time data capture and advanced analysis, enabling us to monitor utility usage continuously, identify inefficiencies, and optimize energy consumption.

Improved Financial Oversight

RDBI will facilitate informed decision-making, provide transparent and consistent operational insights, and ensure seamless data integration with existing systems.

Budgets & Accruals will deliver comprehensive budgeting and accrual management tools.

Cost Savings & Operational Efficiencies

The automation and advanced analytics provided by these add-ons will lead to significant labor hour reductions, enhanced compliance, and optimized energy usage.

Predictive analysis facilitated by Smart Analytics will reduce operational costs and runtime, while accurate budget management through Budgets & Accruals will prevent financial discrepancies and overspending.

ENERGYCAP. The Business Case: EnergyCAP Utility Bill Management Software

EnergyCAP is the trusted solution to centralize, manage, and maximize your utility, energy, and carbon data. With over 40 years of industry leadership, EnergyCAP is trusted by more than 10,000 organizations globally. It eliminates manual processes, transforms data into intelligence, and drives measurable financial and sustainability outcomes.

Problems we solve

Fragmented, manual, and inefficient utility bill management systems, leading to:

- Inconsistent data entry and
- Fragmented energy data.
- Undetected billing errors and

Sustainability goals.

EnergyCAP provides a comprehensive solution that ensures accuracy, and consistency in costs and sustainability

Benefits of one system over several

Switching to a unified energy and sustainability software like EnergyCAP offers:

- ▶ **Cost avoidance:** Automated utility bill audits flag billing errors, reducing unnecessary expenses.
- ▶ **Time savings:** Organizations save an average of 37 hours per month in employee time.
- ▶ **Financial-grade GHG accounting:** Accurately track and report emissions to meet sustainability goals.
- ▶ **Integrated benchmarking and reporting:** Gain visibility with customizable dashboards and seamless ENERGY STAR Portfolio Manager integration.
- ▶ **Data accuracy and actionability:** Ensures clean, reliable data for making informed decisions.
