

EnergyCAP is a powerful energy management software application for managing utility bill data.

Two views of your data:

- **Facilities**—Buildings and Meters module
- **Accounting**—Accounts module

How does my utility bill data get into EnergyCAP?

- Manual entry
- Bill import
- Bill CAPture
- Chargebacks

Three types of data

- **Billing period data** uses the raw billing data as it is received from the utility vendor. This type of data is better when working with accounting functions.
- **Calendarized data** is more representative of monthly use and cost. For year-over-year COST comparisons use calendarized data.
- **Normalized data** is best when comparing USE year-over-year because it removes weather as a variable.
