

Financial-grade carbon accounting, simplified

GHG accounting doesn't have to be hard. EnergyCAP CarbonHub™ automatically converts your energy and utility information into greenhouse gas emissions. Report on Scope 1, 2, and 3 emissions and apply custom, date effective factors as needed. Organize and analyze your emissions data with reports and dashboards to easily communicate the impact of your programs.

Achieve your sustainability goals faster so you can spend time on projects that matter.

GHG accounting

Automatically convert your energy and utility information into greenhouse gas emissions. Define default GHG factors per resource time or manage in bulk.

Scope emission tracking

Track and report on Scope 1, 2, and 3 emissions at meter, building, and portfolio level.

Reporting

Run shareable reports and apply custom factors as needed. Charts and graphs elevate your annual sustainability report and save you time.

Communicate data

Organize and analyze your emissions data with reports and dashboards to easily communicate the impact of your programs and progress towards goals.

Track progress towards targets

Set GHG emissions targets and track YOY emissions data and goal progress at the micro- and macro-level.

Comply with confidence

Eliminate the burden of meeting regulatory and voluntary compliance by structuring your reports how you want.

EnergyCAP CarbonHub is available for new or existing customers to bundle with any other EnergyCAP solution. For customers seeking an independent carbon accounting platform, EnergyCAP CarbonHub is available to purchase stand-alone.
